- Multilect may pay an annual advisor fee to your financial advisor out of the annual management fee of Multilect. This is set and considered when the price of the portfolio is calculated (i.e., part of the standard expense of the portfolio); you cannot negotiate this fee percentage.
- You may negotiate an additional annual advisor fee to be paid to your financial advisor. Units will need to be cancelled to pay your advisor this fee.
- Your fees may be amended by Multilect / Guard risk from time to time, and in such event, a notification will be sent to the investor.

Risk Warning

- Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS are traded at the ruling price and can engage scrip lending and borrowing up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from Multilect/ Guardrisk Management Company Ltd. Commission and incentives may be paid and if so, would be included in the overall costs. Different classes of units may apply in a portfolio and are subject to different fees and charges. A fund of funds is a portfolio that invests in portfolios of collective investment schemes, which levy their own charges, which could result in a higher fee structure for these portfolios. A Feeder Fund is a portfolio that, apart from assets in liquid form, consists solely of participatory interests in a single portfolio of a collective investment scheme. A unit trust fund may be capped at any time in order for it to be managed in terms of its mandate. Forward pricing is used. Fluctuations or movements in exchange rates may cause the value of any underlying international investments to go up and down. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (Brokerage, STT, VAT, Auditor's fees, Bank Charges, Trustee and Custodian fees and the Annual Management fee) from the portfolio divided by the number of participatory interests (units) in issue. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. The investor furthermore agrees that Multilect/Guardrisk will not be liable for the consequences of market influences and consequent changes in unit prices.
- Multilect/Guardrisk shall not be held responsible for any loss, consequential or otherwise, arising from changes in tax or other legislation that may have an impact on the performance of this investment.
- A living annuity allows you to set your income level subject to constraints imposed by the authorities from time to time and allows you to select a wide range of investments in respect of the capital that will generate the annuity. The level of income you select is not guaranteed for the rest of your life. The level of income you select may be too high and may not be sustainable if:
 - you live longer than expected with the result that the capital is significantly depleted before your death; or
 - the return on the capital is lower than that required to provide a sustainable income for life.

It is your responsibility (in consultation with your financial advisor) to ensure that the income that you select is at a level that would be sustainable for the rest of your life. You need to carefully manage your income drawdown relative to the investment return on the capital in order to achieve this. The table below can be used as a guide.

Years before your income will start to reduce:

Investment Return per Annum (before inflation & after all fees)						
Annual Income Rate selected at Inception		2.50%	5.00%	7.50%	10.00%	12.50%
	2.50%	21	30	50+	50+	50+
	5.00%	11	14	19	33	50+
	7.50%	6	8	10	13	22
	10.00%	4	5	6	7	9
	12.50%	2	3	3	4	5
	15.00%	1	1	2	2	2
	17.50%	1	1	1	1	1

It is important to note that the table above assumes that you will adjust your percentage income selected over time to maintain the same amount of real income (i.e. allowing for inflation of 6% per annum). Once the number of years in the table above has been reached, your income will diminish rapidly in the subsequent years.

Please ensure that your financial advisor has explained both the advantages and the risks of the living annuity and compared these against conventional annuities (where the insurer carries the full investment risk and the risk of you living longer than expected). The table is a general guideline and should be considered taking into account each annuitant's financial situation and all other sources of income. It is an indicative guideline only, to assist you in making informed decisions in respect of your annuity.

The FSCA (Financial Services Conduct Authority) determined the maximum drawdown rates by age band and gender, since these relate to limits to preserve sustainability, which depends on longevity.

Age	Males	Females
55	4.5%	4.0%
60	5.0%	4.5%
65	5.5%	5.0%
70	5.5%	5.0%
75	6.0%	5.5%
80	7.0%	6.0%
85	8.0%	7.0%

- It is important to note that investments held in your living annuity are made up of various types of assets classes such as equities, bonds, property or cash. These underlying assets have different levels of risks and returns associated with them. You and your financial adviser are therefore reminded to carefully consider the overall composition of your living annuity in terms of the exposure to these various asset classes. Too high a proportion of risky assets means there is a greater risk of losing capital while too low a proportion of risky assets means there is a risk that investment returns may be too low to sustain your income. Although there are no specific limits prescribed for living annuity investments, there are for preretirement investments done through any approved retirement fund. In order to protect a member's retirement savings, the Pension Funds Act regulates the maximum limits to the different asset classes that a retirement fund may expose itself to. These limits are there to give guidance to what may be considered prudent investment limitations. As a way to provide similar guidance to those with living annuities, it may therefore be useful to refer to these guidelines to assess the overall

asset composition of your living annuity. However this should never be seen as a substitute for obtaining professional advice and does not take your specific personal circumstances into account.

Broadly speaking the maximum exposure that retirement funds may have to the various asset classes are as follows:

75% to equity investments

50% to non-government debt instruments

25% to offshore investments

25% to property investments

15% to hedge funds, private equity funds and any other asset not specifically mentioned aggregated together

10% to commodities like gold

This regulated exposure will apply while you are saving up to your retirement through an approved retirement fund. After retirement, when you are normally dependent on receiving a regular and stable income, a more conservative approach to asset selection may be desirable. As a result, should your asset composition on your living annuity exceed these limits, you are encouraged to review your living annuity investment strategy, as your capital within your living annuity may be exposed to undue risk.
